IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

WASHINGTON, D.C. 20231

Inventor: Cameron A. Riddell

Serial No: 10/729330

Filed: Dec. 4, 2003

For: Electric Deterrent Device

Examiner: Baisa, Joselito Sasis

Art Unit: 3643

6TH SUBMISSION OF PRIOR ART UNDER 35 U.S.C. 301

The undersigned recently discovered yet another reference, Fly-Bye™ Bird Control Products 2002 Catalog ("2002 Catalog"), which is critical to allowability of the claims as amended after final.

Claim 1 – the reference teaches an electric deterrent device for attachment to a surface, comprising an elongate base constructed of an extruded, flexible, non-conductive plastic material, having two spaced apart areas separated by a non-conductive area, the base being sufficiently flexible to attaché to a flat or a curved area, a pair of electrically conducting braided wires attachable to positive and negative poles of a power source. Fly-Bye 2002 does not show that the braided wires are attached through sewing, but many other references (previously provided) show that it was conventional to attach a braid to a substrate by sewing.

Claim 2 - Fly-Bye 2002 shows strands that are substantially round.

Claim 3 - Flat strands are not shown in the reference, but are a mere design choice.

Claim 9 - Fly-Bye 2002 shows strands that are stainless steel.

Claim 10-11 – Copper and Zn coated Cu strands are not shown in the reference, but are a mere design choice.

Claim 12 – The base of Fly-Bye 2002 is PVC.

Claim 13 -- The base of Fly-Bye 2002 is an elastomeric material, namely PVC.

Claim 14 –Fly-Bye 2002 shows that each of the braided elements reside in appropriately sized chambers.

Claim 15 – Inclusion of non-conducting strands in a braided electric conductor is not shown in the reference, but is a mere design choice.

Claim 16 - Fly-Bye 2002 clearly teaches deterring a pest using a deterrent device comprising a base attachable to a surface (with acrylic adhesive), a pair of electrically conducting woven wires, which can be bent in any direction, the width of the braids expanding or contracting as individual strands move relative to one another (this is how strands behave in a braid), and where the braids are attached to spaced apart pedestal areas. As above, the only difference between the device of claim 16 and the Fly-Bye 2002 reference is the use of sewing, and as noted repeatedly, it was conventional as of the critical date to attach a braid to a substrate by sewing.

Claim 18 - Inclusion of non-conducting strands in a braided electric conductor is not shown in the reference, but is a mere design choice.

Claim 19 - Fly-Bye 2002 shows strands made of metal.

Claim 20 - Fly-Bye 2002 shows strands made of stainless steel.

Claim 21 - Fly-Bye 2002 shows a base made entirely of a non-conductive material (PVC).

Claim 22 - Fly-Bye 2002 shows a base made entirely of a non-conductive material (PVC).

Claim 23 - Fly-Bye 2002 does not show a base made entirely of one of the listed materials, but those are mere design choices.

Claim 24 - Fly-Bye 2002 shows strands that are substantially round.

Claim 25 - Flat strands are not shown in the reference, but are a mere design choice.

Claim 26 - Fly-Bye 2002 shows strands that are tightly wound.

Claim 27 - Loosely wound strands are not shown in the reference, but are a mere design choice.

Claim 28 - A single wire conductor is not shown in the reference, but is a mere design choice.

Claim 29 - Multi-wire strands are not shown in the reference, but are a mere design choice.

Claim 30 - Fly-Bye 2002 shows braids in which each of the strands is a conductive wire.

Claim 31 - Multi-wire strands are not shown in the reference, but are a mere design choice.

Claim 32 - Fly-Bye 2002 shows a base that is entirely extruded.

Claim 33 - Fly-Bye 2002 shows a channel in the base between the two spaced apart areas.

Claim 34 - Fly-Bye 2002 shows a channel in the base between the two spaced apart pedestal areas.

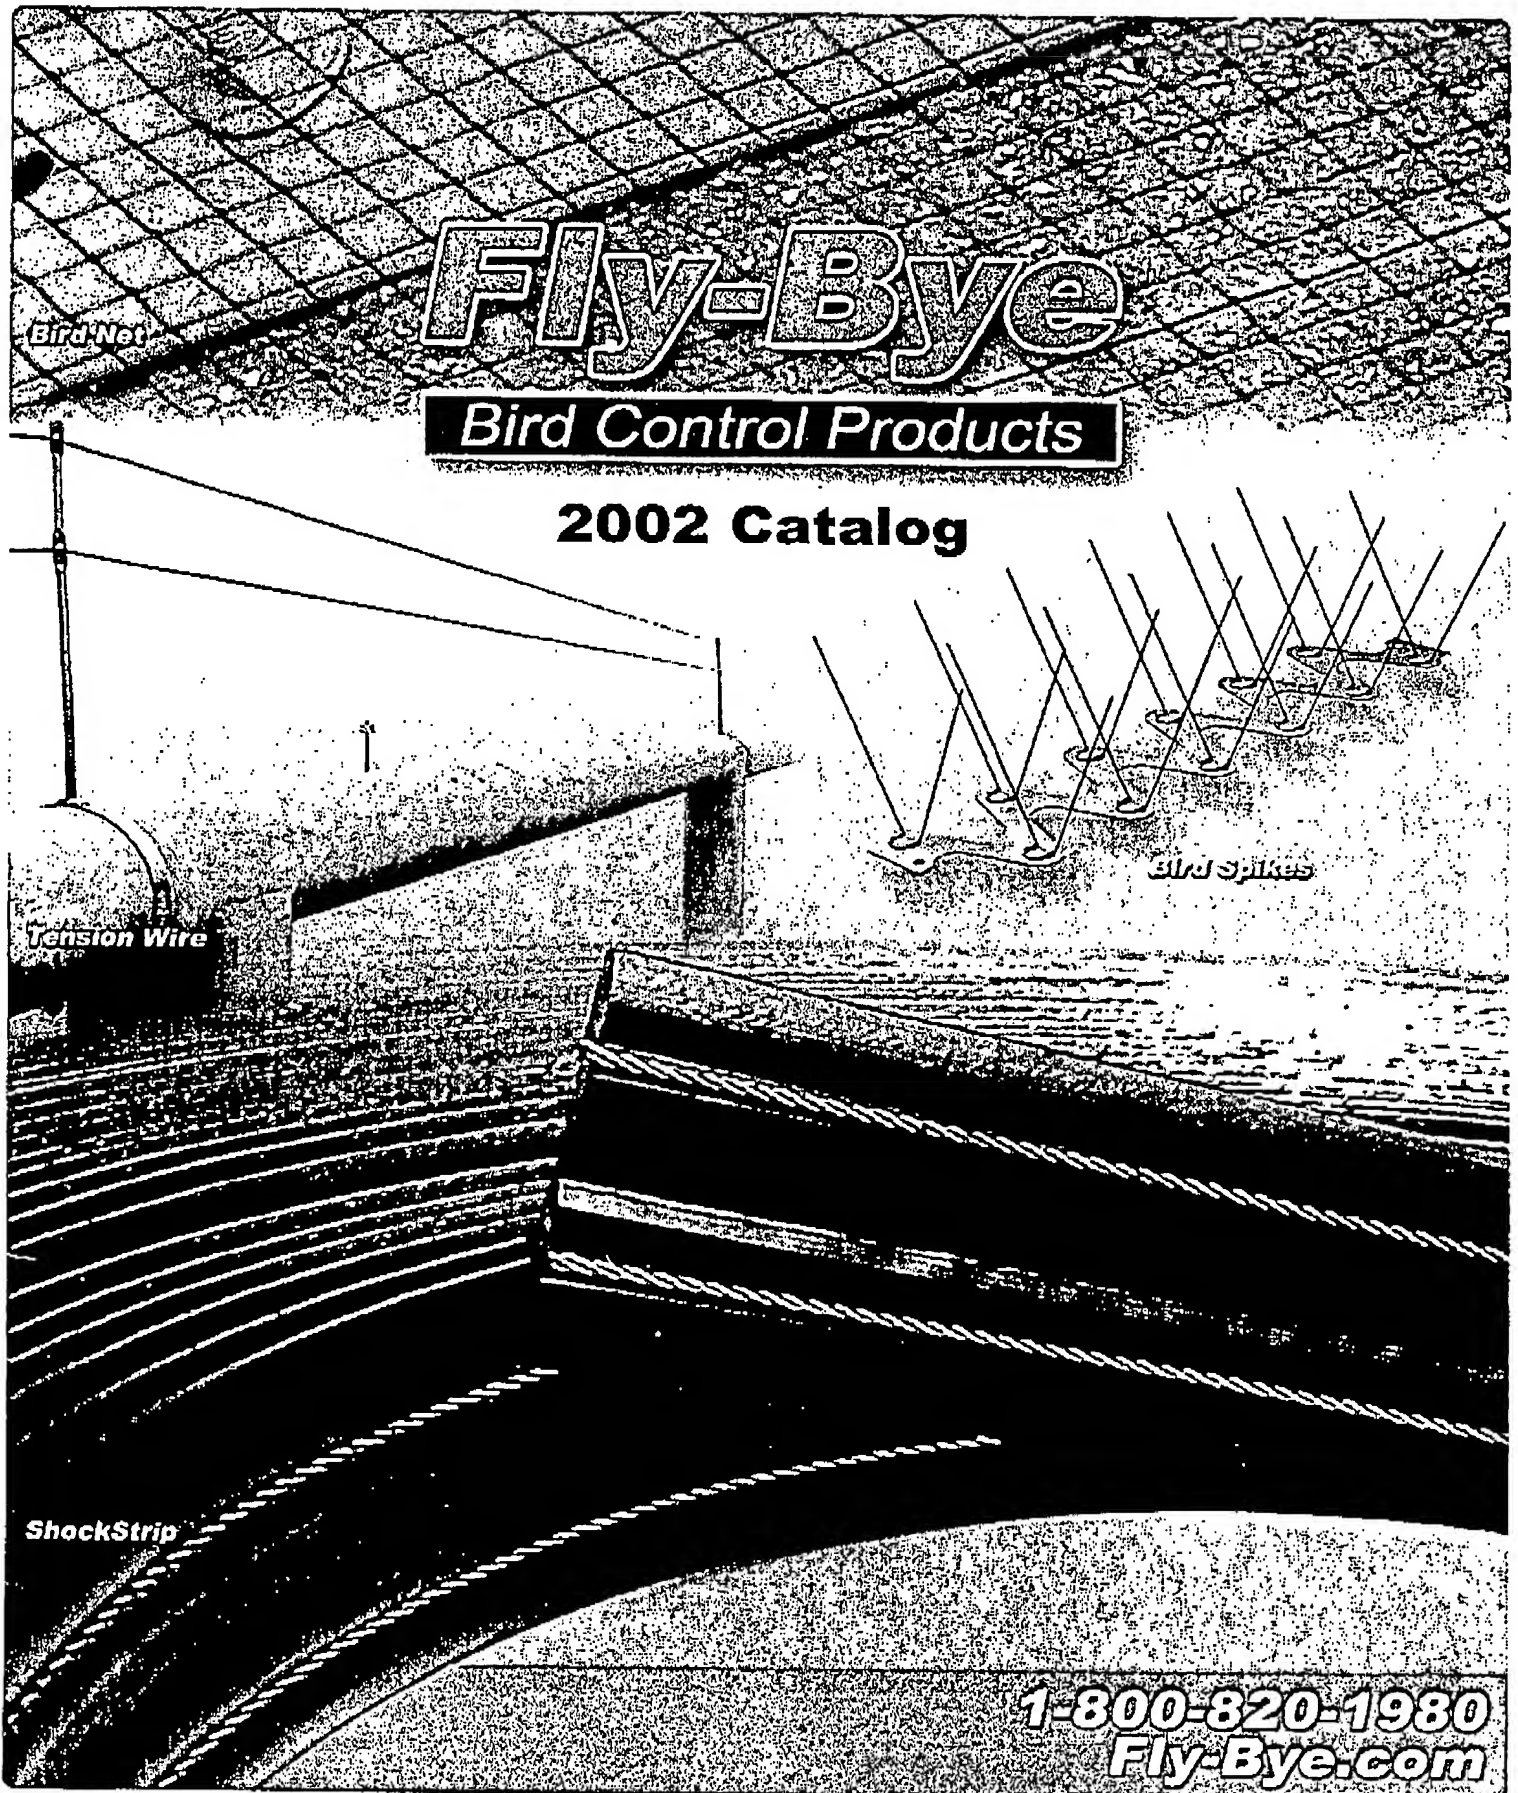

Claim 35 - Fly-Bye 2002 shows a channel formed in the base between the two spaced apart pedestal areas.

A copy of the Fly-Bye 2002 catalog is attached.

Did you know . . . ? Bird droppings carry diseases such as Bacterial Enteritis, E. Coli, Salmonella, and many other bacterial, fungal and viral diseases that may be harmful to your health. Droppings are also very acidic, which can ruin the finish on structures.

For More Information, Call 1-800-820-1980

Fly-Bye™

Bird Control Products

Bird Net

Fly-Bye 3/4" bird net is used to exclude most all pest birds, such as starlings, sparrows, swallows, and other small pest birds. The weight of the 3/4" nylon net is 0.0188 pounds per square foot.

Fly-Bye 2" bird net is used to exclude larger pest birds, such as pigeons. The weight of the 2" nylon net is 0.01 pounds per square foot.

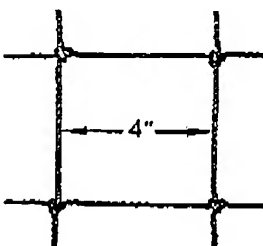

Fly-Bye nylon bird netting is made using nylon twine that is twisted and knotted for maximum strength. The net is treated with a UV stabilizer, and then bonded to seal the twine. **Fly-Bye** bird netting is available in mesh sizes of 3/4", 2", and 4".

* for architectural specs please call 1-800-820-1980 or visit Fly-Bye.com

Nylon	20' x 40'	40' x 40'	40' x 80'	40' x 100'	40' x 200'
